Introduction

Modern time is supporting the business environment in quite an effective manner.

Several aspects are gaining people interest in leading to new methods of engaging customers.

Such a platform develops interactive measures with the people who are part of society (Nabieva, 2021). In this regard, digital marketing is considered one of the most important and basic aspects of the modern period. This is because it contains great demand and involvement of people willing to participate daily.

Their interaction and smart actions are leading to impact their overall scenario.

Besides that, website management is not becoming one of the major discussion topics. The advanced websites, along with various accessibility options, are leading to impact the overall scenario positively. Similarly, in this regard, GIKI Zero is one of those smart strategies supporting people with the advanced website option. This website is directly hitting various people to make them aware of their contribution to environmental measures. All of such information has a great impact on the life of individuals as well as their working environment (Christina, Fenni and Roselina, 2019). This website supports individuals with the interactive aspect to consider their contribution in generating a carbon footprint. As a result, it is expected that such a website has a great influential aspect. Such aspects will notify the individuals about their contribution to the environment (Thompson et al., 2018). The aspect of digital marketing in this regard is trying to support the action plan of the GIKI Zero website. This needed special

The marketing campaign focuses on developing the campaign plan that will highlight all the major actions that are expected to be taken in this regard. Apart from this, there will be clear indicators and KPIs to evaluate the performance. The report also aims to highlight all the communication plan and strategy that is essential to consider in this regard. Moreover, there is a great aspect of the budget distribution that targets the final measures and the testing plan that is needed to consider in terms of effective use of the website. Therefore, based on all these aspects, the report will have a general possible and appropriate conclusion along with a recommendation plan. Such a recommendation plan will propose effective measures that could

oThe major KPI in this regard is the number of people visiting the website and accepting the change. In this manner, there will be a specific number of people aiming to be active visitors to the website. Such numbers include 100,000 signups in which 80% of signups regularly engage with the Giki Zero website resulting in an average impact score reducing month on month to the end of 12 months and beyond.

the website pages. For saints, on one page, the post will engage older people and mention their contribution to the development of the carbon footprint. In this regard, all the people will get addressed with the content to read about their actions. Such posts will enhance their understanding of their actions leading to developing carbon issues in the environment. This could be an interactive aspect for the people to consider their role in the negative measure of the environment (Setyawan and Gamayuni, 2020).

Moreover, the next post on the website will be related to the measures and steps that need to be taken to solve the major issues of the carbon footprint. The major focus of this post will be related to the awareness plan and mitigation steps that should be taken to resolve the major issues with aspect to carbon footprint and related matters. This is having a great impact on the environment concerning the actions that were taken.

In such a manner, both the website's content will be based on different content and measures as one is mainly highlighting the issues that include people contribution. In contrast, the next post in this regard is directly targeting the solution and steps to be taken in this regard (Cal and olive, 2021). The interactive results will highlight the public attention towards the major option public select. The public's response with relation to both different posts will indicate their interest.

In such a way, A/B testing procedures will be applied in website testing.

There is another aspect of the A/B testing that will be used in this regard. For instance, a similar strategy will get used to emailing the client to the client. At first, some clients will be provided with the subject line "Want to know how much you contribute to the carbon footprint to the environment". The other tagline will indicate, "Want to know how you can contribute to saving the environment". The reason behind sending such
